Non-character keys

- Shift keys
- Shift lock key
- Space bar
- Back space
- Margin releaser
- Key releaser
- Tabulator key Tabulator set key, Tabulator clear key

Shift keys

- Little fingers on both hands are used for pressing the shift key.
- Improper shifting causes bad alignment.(PYQ)

There are 2 kinds of shift system

a) Segment shift system
b) Carriage shift system

- There are 2 shift keys in the typewriter that are used for getting uppercase characters on the paper.
- In the segment shift machine, the segment is lowered to create uppercase characters.

Shift lock

- Shift lock key is located at the left side of the keyboard
- It is used for getting continuous upper-case characters

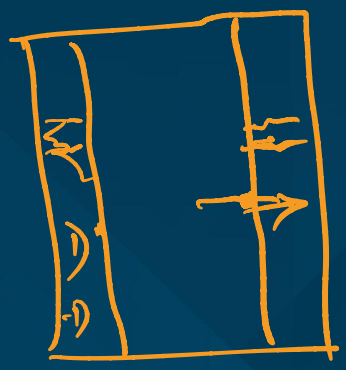

RMR

Shift → Upper case

Shift lock → Continuous UC letter

Marginal releaser

- Marginal releaser key is used to type beyond the right and left margin stops.
- It helps to complete a word on the right side margin.
- On the left side margin, use marginal releaser to add notes and paragraph numbers.

spacebar

- The Spacebar is fixed at the bottom of the keyboard.
- The space bar is operated by the right thumb.
- The spacebar is directly connected to the dog block.
- We strike the spacebar to get blank space.
- Spacebar is a part that is used to make words in typewriting.
- The spacebar when operated, the carriage moves one degree to the left without making an impression on the paper.

Backspacer

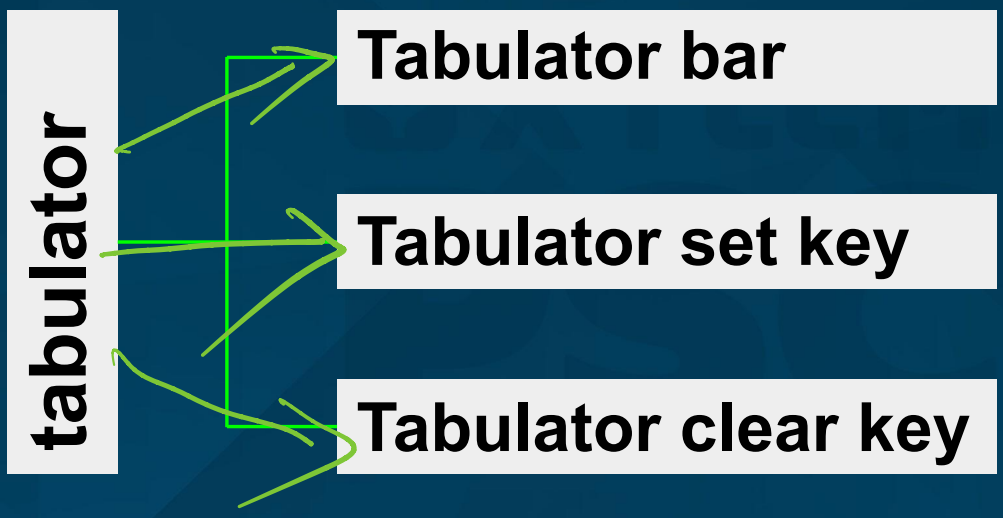

- Backspacer is a non-character key that enables carriage movement from left to right.
- The backspace key is used to retype a letter lightly printed or omitted.
- The backspace key is located at the top right corner of the keyboard on Facit, Halda, and Godrej Prima typewriters.

Tabulator

- Tabulator helps the carriage to move quickly from one point to a predetermined point.
- Tabulator stop is also known as tabulator bits
- Tabulator is used to indent a paragraph
- Tabulator is also used for typing text in columns.

Tabulator clear key

Dead key

- The dead key makes an impression on the paper but the carriage does not move.
- The dead key does not act on the universal bar.
- In the Malayalam typewriter, there is one dead key.
- Chandrakkala is known as dead key in the Malayalam typewriter.

Key releaser

- When keys become jammed, a key releaser can be used to unjam them.

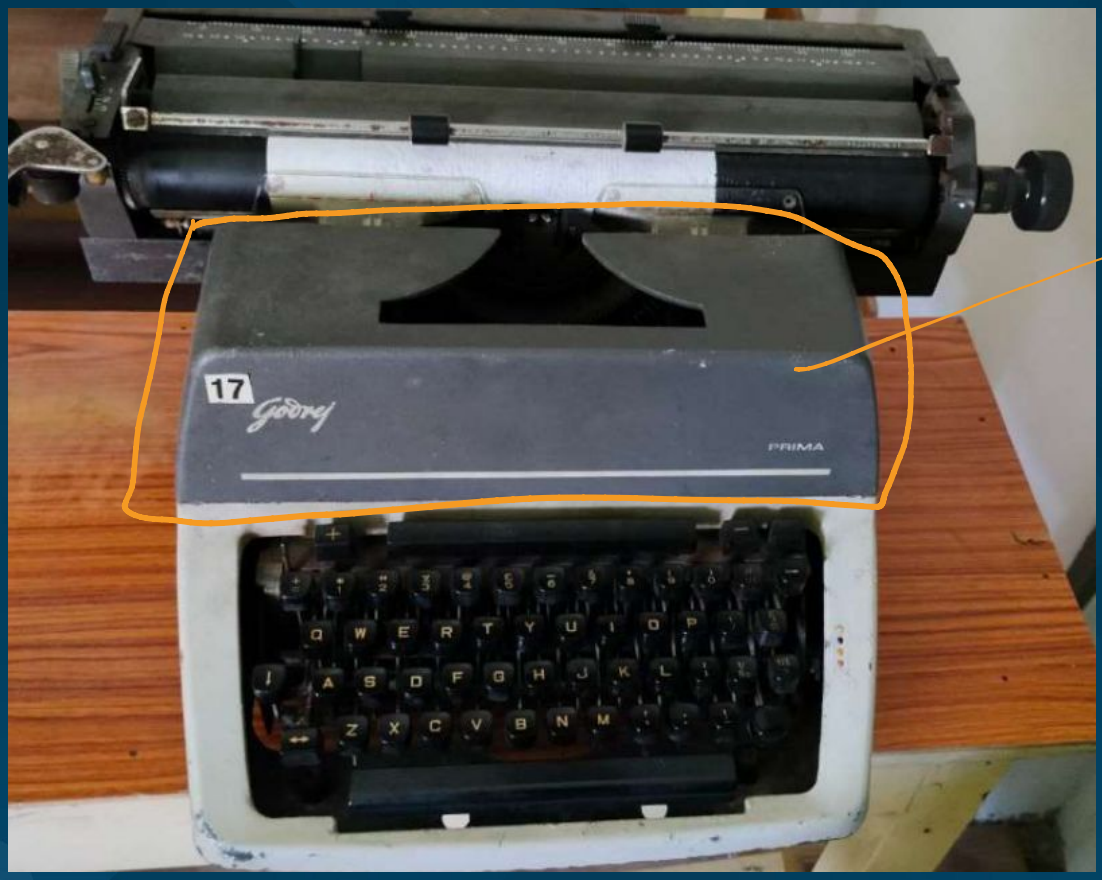

Top plate

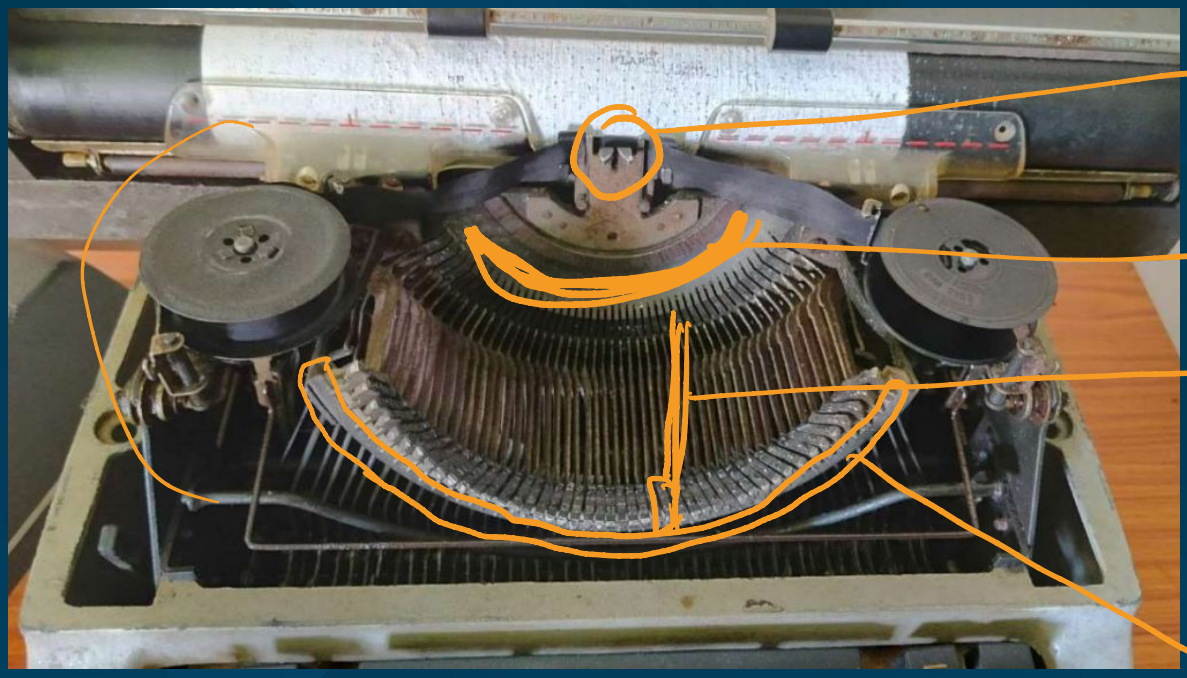

- The top plate is otherwise called a “ Cowl” or Hood.”
- Type basket is covered by a top plate.

Type basket

- The type basket consists of segment, type bars, type guide, and the typebar cushion.

Keys of typewriter(part 3)

Type basket

- The type basket consists of segment, type bars, type guide, and the typebar cushion.

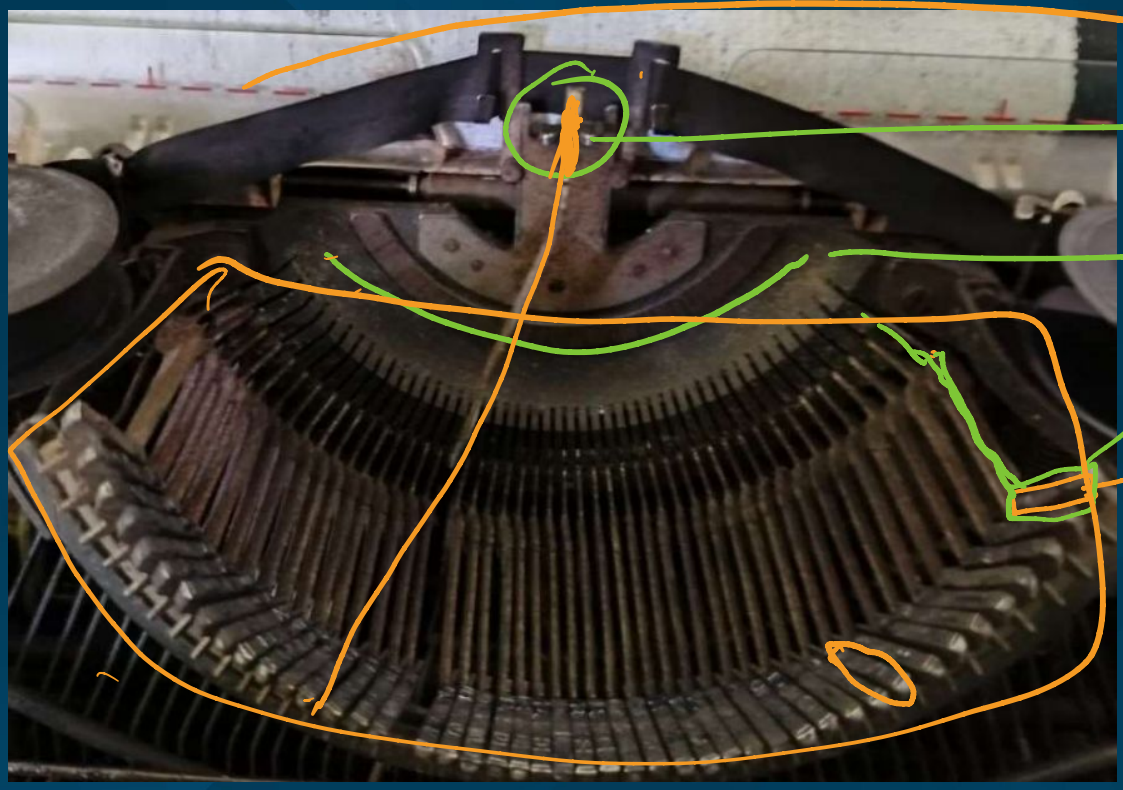

Segment

- Segment is fixed just above the type basket.
- The shape of the segment is semicircular with slots.
- Each type bar moves in its slot in the segment.
- Type guide is fitted on the top of the segment.
- Segment should not be oiled. Slots in the segment can be cleaned with petrol.

Type guide

- Type guide is fixed at the top centre of the segment.
- Type guide is also known as centre guide, common centre, or printing point.
- The scale between the type guide and the cylinder is known as the line finder scale/ Alignment scale.
- Chamois leather is used for cleaning the type guide.

Type head

Type bar

- Type bars are iron rods to which two types are soldered at the head.
- The typebars are connected to the segment using fulcrum wire.
- Fulcrum wire is also known as segment wire.
- All type bars rest in the type basket.
- The type bar is fitted with two characters.
- Type bar cushion is provided to prevent injuries to the typebars.

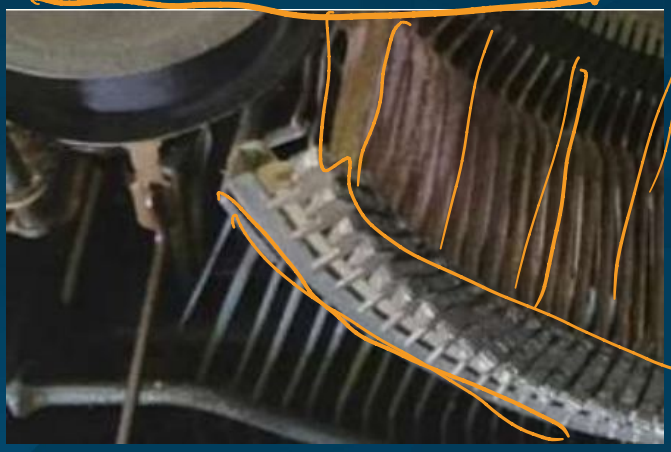

Type head

- Commonly used typeheads are Pica and Elite.
- Other examples: Pica, Elite, Gothic, Roman, Italics, Pinpoint, Script, etc.
- In elite, there are 12 letters to an inch
- In pica, there are 10 letters to an inch
- In Roman, there are 9 letters to an inch
- Most of the metal letters are made with lead.
- Type faces filled with dust and ribbon ink are known as Clogging.
- Typefaces should be cleaned with petrol.

Type bar cushion

- Type bar cushion helps to reduce the noise when the type bars return after striking the cylinder. Type bars are resting on the type bar cushion. Type bar cushion prevent injury to the type bars.

Universal bar

- Universal bar is located behind the segment.
- The location of the universal bar in the Halda typewriter is in front of vertical link.
- The universal bar is connected to dog block by means of rocker arm.

Ribbon position indicator

- Also called Bichrome device lever.
- It indicates the portion of the ribbon that will be used.
- Ribbon position indicator can be adjusted in 3 ways.
- It is fixed on the Right/left side of the keyboard.
- White colour position of the ribbon indicator helps in stencil cutting.

Bichromed device lever

1) ……. and ……. are called guide keys.

A. (A) k and j
B. (B) n and m
C. (C) a and s
D. (D) a and ;

2)The shape of the type segment is :

(A) Circle
(B) Semi-circle
(C) Triangle
(D) Rectangle

3) ..... helps the carriage moves instantly to predetermined position.

(A) Shift key
(B) Master key
(C) Home keys
(D) Tabulator key

4) The carriage rack is moves towards left when the ……. is operated.

(A) Non-character key
(B) Dead key
(C) Back space key
(D) Character key

5) Which key is the Master Key of English typewriter?

(i)M (ii) C (iii) N (iv) F

(A) i only
(B) ii only
(C) iii only
(D) iv only

6) In which year typewriter was invented?

(i) 1814 (ii) 1741 (iii) 1714 (iv) 1841

(A) i only
(B) ii only
(C) iii only
(D) iv only

7) Some keys in the middle row of the typewriter have guide keys. Select the guide keys from the following

(i) a,s,d,f (ii) ;,l,k,j (iii) a and ; (iv) f and j

(A) (i) and (ii)
(B) (iii) only
(C) (ii) only
(D) (i) only

8) Which one of the following statements is correct?

(i) A spacebar moves the carriage towards left step by step without producing impression

(ii) A character key skips from one column to another column

(iii) A Tabulator key moves the carriage towards left and an impression is also produced.

(iv) Back space key moves the carriage towards left step by step without producing impression

(A) (i) only (B) (i) and (ii)

(C) (iii) only (D) (iv) only

9) The characteristics of a standard typewriter are given below. Pick out the correct option/s from the following.

(i) It should have a universal keyboard with four straight banks

(ii) It should have a single shift key operation for typing small and capital letters.

(iii) It should have such mechanism that the typist is in a position to type with speed and accuracy.

(A) (i) and (ii) (B) (ii) and (iii)

(C) (i), (ii), (iii) (D) (i) and (iii)
